

**HANES** GEO COMPONENTS

A *Leggett & Platt* COMPANY

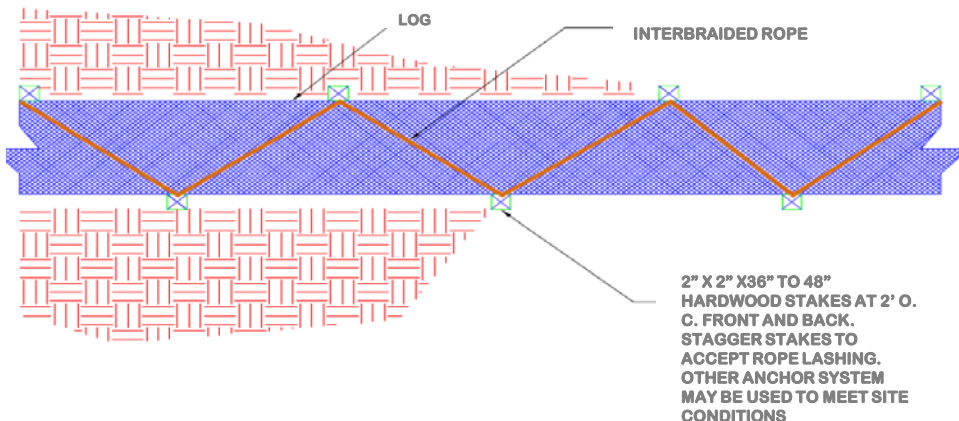

# Coir Logs

**Hanes Geo Components** coir logs are made from compressed 100% blended coir fiber in 5, 7 and 9 lbs. density. Exterior netting is typically made of coir or poly netting. Diameters of 12", 16", and 20" are available.

Typical Installation Method: Create a trench or seat to the dimensions of log and at the elevations specified. Lace logs with approved lacing material end to end to create a continuous length. Cross-lash rope front to back to prevent log from moving.
