Hanes Geo Components is an industry-leading supplier of geosynthetics and environmental products throughout the United States and Canada. Our sales people and engineers have a deep knowledge of our materials; many of our professionals have over 20 years of industry experience. We now have more than 40 large stocking locations. A division of Leggett & Platt (an S&P 500 company), Hanes Geo Components has a strong commitment to providing the best products, technical knowledge, customer service, and competitive price available.

It is important to us to provide quality assurance and design assistance. Our TerraTex® geotextiles comply with public and private specifications. Our TerraGrid® punched-and-stretched aggregate confinement geogrids are of the highest quality. As part of our technical support, we offer a straightforward design methodology. We assist engineers in reducing project costs by using geogrid to bridge over soft subgrades, reduce pavement structural sections, and extend pavement life.

Hanes Geo Components manufactures several erosion and sediment control products: ScourStop® transition mats, Inlet Pro® sediment bags, and TerraTex® dewatering bags. We manufacture and distribute a large and broad variety of silt fencing: pre-staked, wire-back, logo-printed, DOT, “super silt fence,” lathe, pocketed, etc.

We have expanded our stormwater structures line to include underground storage, retention/detention, and treatment systems.

To increase our service capabilities, we have acquired Canada’s Terrafix Geosynthetics Inc., a market leader and geosynthetic clay liner (GCL) manufacturer.
